DETAILED ACTION

Election/Restrictions

This application contains claims directed to the following patentably distinct species

Please elect one of in Group A:

Species AI: The specifics being wherein the reflecting plate overlaps with at least one of the lower and right sides of the second area in a plan view, when a rubbing direction of the liquid crystal molecules is in about ten o'clock on the first substrate. (Claim 37)

Species AII: The specifics being wherein the reflecting plate overlaps with the lower side of the second area in a plan view, when a rubbing direction of the liquid crystal molecules is in about twelve o'clock on the first substrate. (Claim 38)

Species AIII: The specifics being wherein reflecting plate overlaps with at least one of the lower and left sides of the second area in a plan view, when a rubbing direction of the liquid crystal molecules is in about one o'clock on the first substrate. (Claim 39)

ALSO, please elect one of in Group B:

Species BI: The specifics being wherein a portion of the third insulating layer is formed in the second area.(Claim 43)

Species BII: The specifics being wherein the third insulating layer is formed only in the first area.(Claim 44)

Also, elect one of in Group C:

Species CI: The specifics being wherein the pixel electrode is electrically connected to the switching device through a contact hole that is formed through the first insulating layer.(Claim 45)

Species CII: The specifics being wherein the pixel electrode is electrically connected to the switching device through a contact hole that is formed through the second insulating layer.(Claim 46)

The species are independent or distinct because claims to the different species recite the mutually exclusive characteristics of such species. In addition, these species are not obvious variants of each other based on the current record.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, 8,17,19-25,28-31,33-36,40-42 are generic.

There is an examination and search burden for these patentably distinct species due to their mutually exclusive characteristics. The species require a different field of search (e.g., searching different classes/subclasses or electronic resources, or employing different search queries); and/or the prior art applicable to one species would not likely be applicable to another species; and/or the species are likely to raise different non-prior art issues under 35 U.S.C. 101 and/or 35 U.S.C. 112, first paragraph.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species to be examined even though the requirement may be traversed (37 CFR 1.143) **and (ii) identification of the claims encompassing the elected species**, including any claims subsequently added. An argument that a

claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

The election of the species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the election of species requirement, the election shall be treated as an election without traverse. Traversal must be presented at the time of election in order to be considered timely. Failure to timely traverse the requirement will result in the loss of right to petition under 37 CFR 1.144. If claims are added after the election, applicant must indicate which of these claims are readable on the elected species.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the species unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other species.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141.
